

## THE SPRAY BEFORE YOU SHOOT CAMPAIGN!\*

By Vicki Latham PA-C

Many parent have concerns about vaccines, but now **virtually all injectible medications contain some kind of chemical preservative**. Adjuvants, such as aluminum are often added to stimulate the immune system to create a more powerful response.

When you choose to vaccinate...Spray before you shoot!

Pure Body (PB) drops and especially, Pure Body Extra Strength Spray (PBX) is made of a non-toxic, totally safe mineral that attracts and removes heavy metals and industrial toxins from the body at the cellular, blood, and tissue level. This is so safe, it is even recommended for pregnant woman and children.

Common additives are: Formaldehyde, Aluminum, Thimerosal (Mercury). These can be removed at the blood and cellular level, safely and effectively.

I suggest that you ingest 4 sprays and/or 4 drops orally within 4 hours of taking the injection, and at least every 8 hours after that for 3-4 days. If you have PBX spray, I also recommend you spray the injection site just before injecting the product, and again within the next 15 minutes. I have seen this minimize or totally avoid any redness or swelling of the injection site for many people.

For more information about Pure Body Products, go to [www.toxin-clear.com](http://www.toxin-clear.com) .

Also, to learn more about the benefits of detoxification using the mineral Clinoptilolite, check out the article "What is the best way to detoxify the body".

Clinoptilolite has been granted GRAS (Generally Regarded As Safe) Status from the FDA, and is safe to use for people of all ages, as well as animal pets. It cannot cause an allergic reaction.
